1. Overview

BlueFairy FarmBooks is a self-hosted WordPress accounting plugin built specifically for United States farm operations. It tracks farm income and expenses against an IRS Schedule F–aligned chart of accounts, runs payroll (including piece-rate labour), manages vendors for 1099-NEC reporting, and produces print-ready reports that transcribe directly onto tax forms.

Pro dashboard — Chart.js donut for YTD expense breakdown, monthly income vs expense line, budget vs actual bars, and payroll widget.

FarmBooks ships as two coordinated plugins:

- **Lite** (`bluefairy-farmbooks-lite`) — free, provides the chart-of-accounts, categories, transaction ledger, YTD dashboard, Income List / Expense List / YTD Summary reports,

and Settings.

- **Pro** (`bluefairy-farmbooks`) — paid add-on that layers vendors, employees, payroll, budgets, Schedule F prep, Cash Flow Statement, Profit & Loss, Budget vs Actual, Payroll Summary, WooCommerce sync, receipt attachments, sodium-encrypted SSN/EIN storage, plugin-scoped 2FA, and licence delivery via BlueFairy Licence Manager.

2. Lite vs Pro at a Glance

Feature	Lite	Pro
Chart of accounts (Schedule F–aligned)	✓ read + edit defaults	✓ + Add / Delete accounts
Income & expense transactions	✓	✓ + vendor, account code, tax-deductible flag, receipt attachment
Categories	✓ view	✓ + Add / Delete categories
YTD dashboard widgets	✓ Income / Expenses / Net / Recent 10	✓ + expense donut, income vs expense line, budget bars, payroll widget
Reports	YTD Summary, Income List, Expense List	+ Profit & Loss, Cash Flow, Schedule F Prep, Budget vs Actual, Payroll Summary
Vendors + 1099-NEC CSV export	—	✓
Employees + payroll wizard + W-2 CSV	—	✓
Budgets grid + auto-save	—	✓
WooCommerce order sync	—	✓
SSN / EIN sodium encryption	—	✓
Plugin-scoped two-factor auth	—	✓
Licence key + auto-updates	—	✓

3. Requirements

Requirement	Minimum
WordPress	6.4
PHP	8.1 (sodium extension required for Pro encryption)
MySQL / MariaDB	5.7 / 10.3
Lite plugin (Pro dependency)	bluefairy-farmbooks-lite 1.0.0 or later, activated first
WooCommerce (optional)	7.0+ for order-sync module
Action Scheduler (optional)	Bundled with WooCommerce; enables background bulk WC-order import

4. Installation

Automatic (WordPress Admin)

1. Install and activate **bluefairy-farmbooks-lite** from WP.org first — Pro will refuse to activate without it.
2. In your admin, go to **Plugins** → **Add New Plugin** → **Upload Plugin**.
3. Choose `bluefairy-farmbooks.zip` and click **Install Now**.
4. Click **Activate Plugin**.
5. Follow the licence-activation notice (see §16).

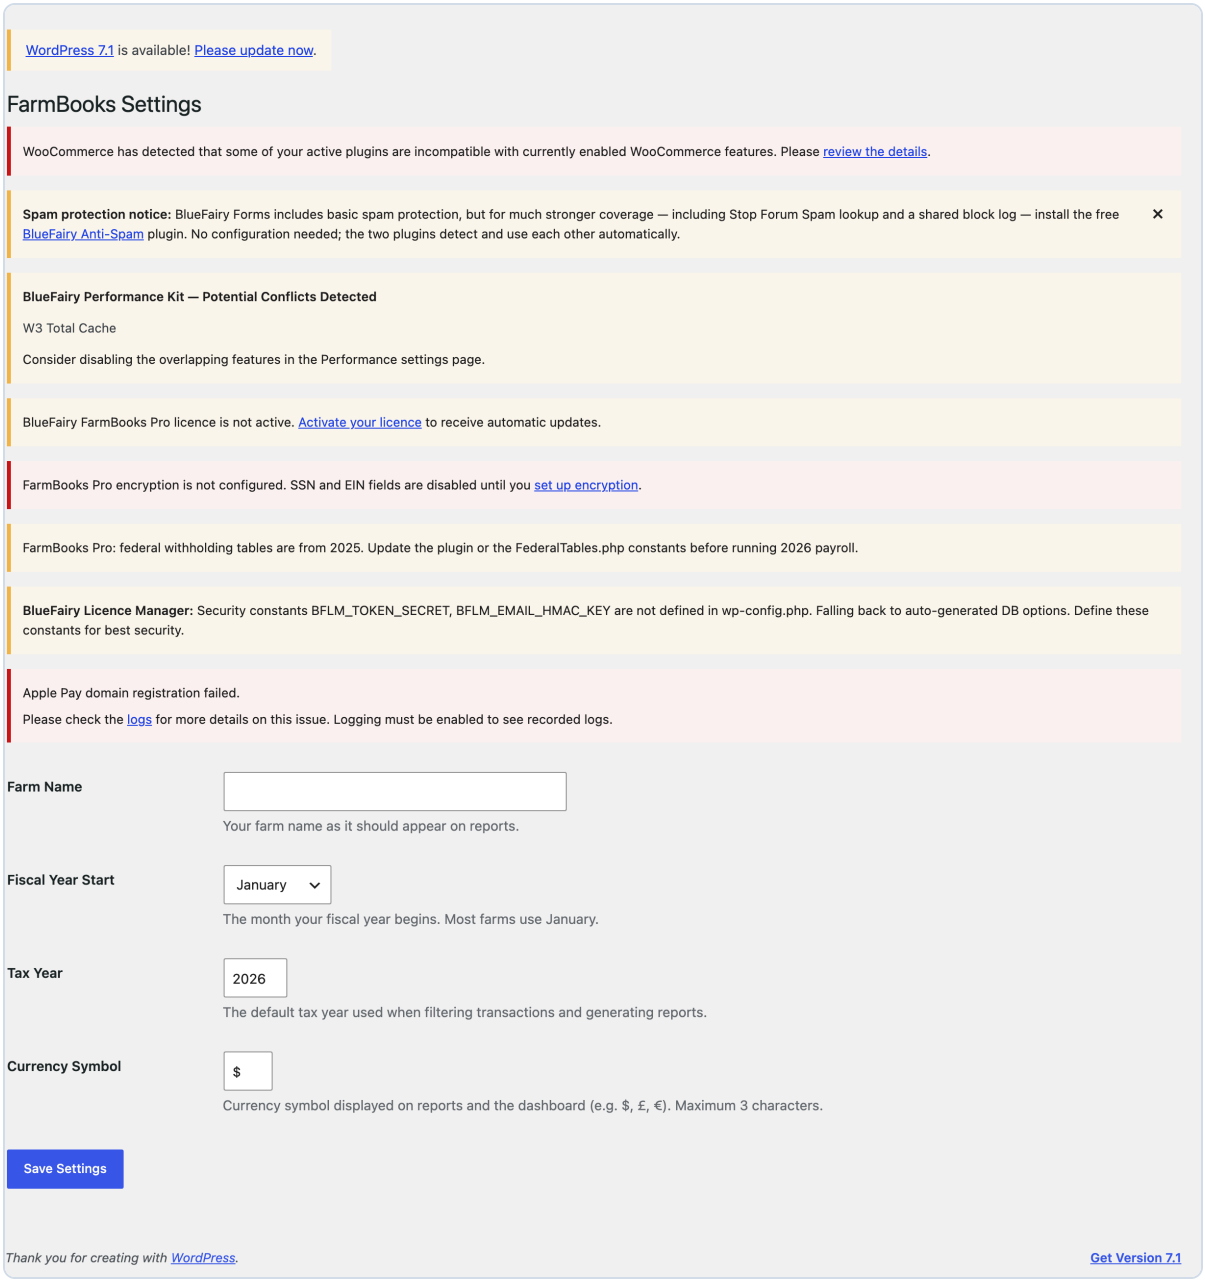

Manual (ZIP Upload / FTP)

1. Unzip `bluefairy-farmbooks.zip` locally.
2. Upload the `bluefairy-farmbooks/` folder to `wp-content/plugins/` via FTP, SFTP, or your host's file manager.
3. In **Plugins**, click **Activate**.

Post-Activation Setup

1. **Set the encryption key** — before saving any SSN or EIN, add `BFFB_ENCRYPTION_KEY` to your `wp-config.php` (see §14).

2. **Configure the farm** — FarmBooks → Settings: farm name, farm EIN, fiscal year start, tax year, currency symbol, date format.
3. **Review the default chart of accounts** — FarmBooks → Accounts. Add / rename to match your operation.
4. **Add categories** — FarmBooks → Categories. Each category links to an account and drives Schedule F line mapping.
5. **Add vendors and employees** as needed (§7, §8).

Settings page — farm name, EIN, fiscal year start, currency, tax year.

5. Chart of Accounts & Categories

Path: FarmBooks → Accounts / Categories.

FarmBooks ships with a Schedule F–aligned account tree covering every income and expense line the IRS recognises for a farm sole-proprietor return. Accounts are typed `income`, `expense`, `asset`, `liability`, or `equity`, and carry a `schedule_f_line` code that drives the Schedule F Prep report.

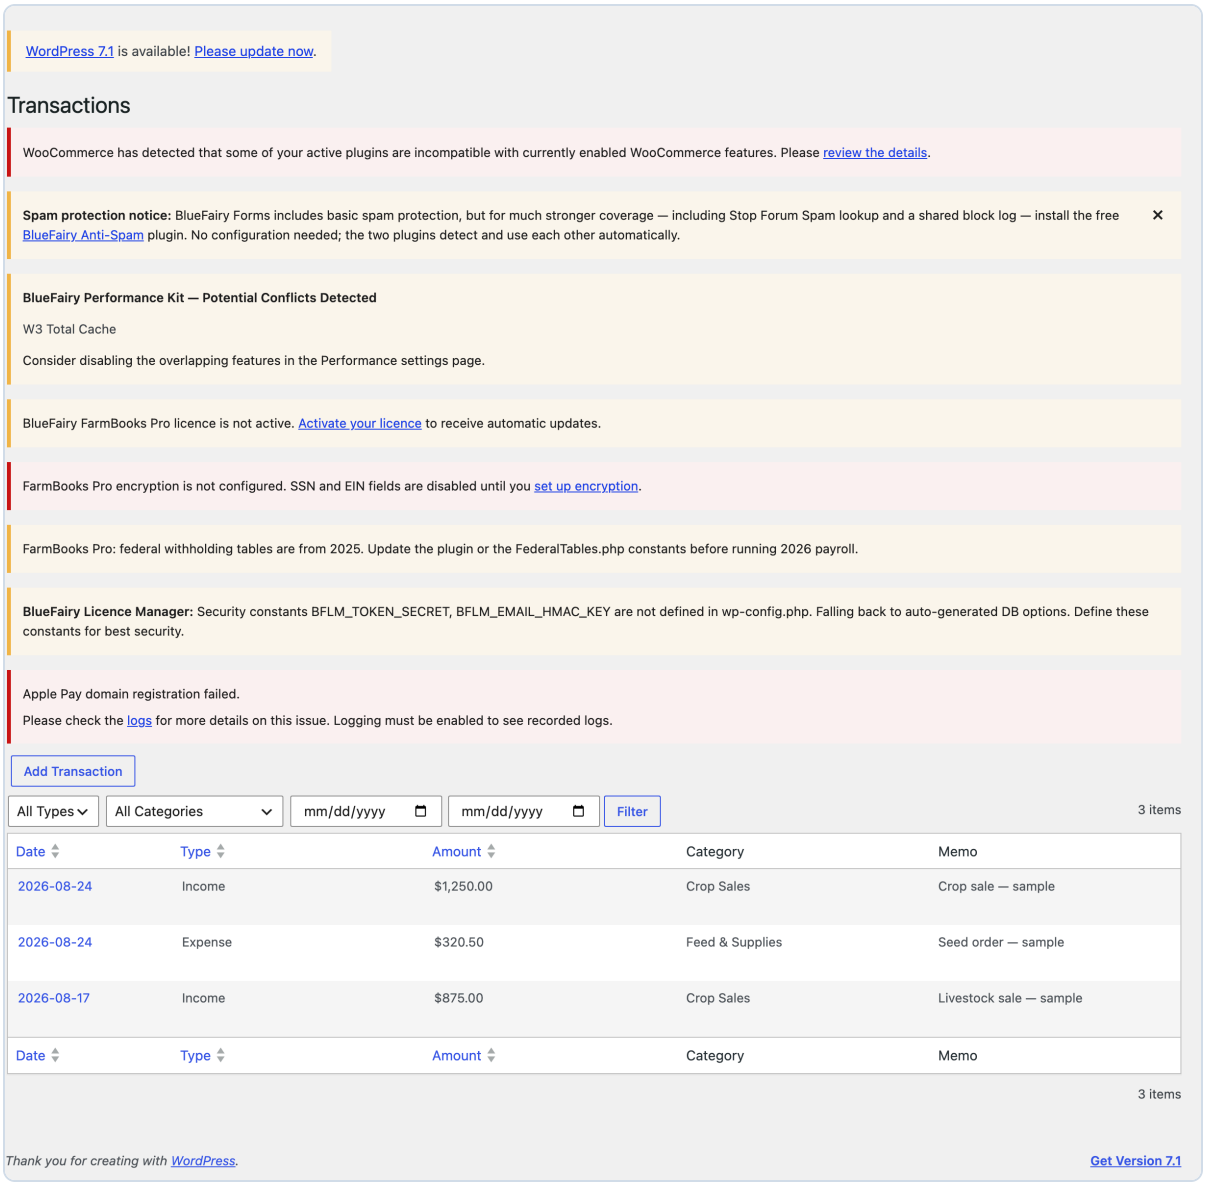

Categories are the day-to-day tags you put on transactions (e.g. "Seeds & Fertilizer" or "Crop Sales") and each rolls up into an account. Add new categories as your operation grows — the mapping to Schedule F is inherited from the parent account.

> **Tip.** Default accounts and categories are marked *default*. Default rows cannot be deleted (only renamed) so the Schedule F line mapping stays intact.

6. Transactions

Path: FarmBooks → Transactions.

Every farm income and expense event is a *transaction*: type (income / expense), date, amount, category, memo, and — with Pro — vendor, account code override, tax-deductible flag, and an optional receipt attachment (PDF / JPG / PNG / GIF, kept in `uploads/farmbooks/receipts/YYYY/MM/`).

Transaction list — filter by type, date, or category. Click Edit to attach a receipt or flag as tax deductible.

Field	Notes
Type	Income or expense — determines which side of Schedule F the transaction lands on
Date	Transaction date; drives the year-and-fiscal-period filter on every report
Amount	Always positive; sign is inferred from type
Category	Required; drives Schedule F line placement via the parent account
Memo	Free text — searched by the list filter
Vendor (Pro)	Optional; needed for 1099-NEC vendors so payments to them aggregate correctly
Account code (Pro)	Overrides the category's default account for edge cases
Tax deductible (Pro)	Filter and totalise deductibles at year-end
Receipt (Pro)	File upload; stored on disk with the file path in the DB

7. Vendors & 1099-NEC

Path: FarmBooks → Vendors.

Vendors are anyone you pay who might need a 1099-NEC at year end (custom-hire operators, mechanics, seasonal contractors, feed suppliers, etc.). Flag any vendor whose total annual payments will meet the IRS $600 threshold with the **1099-NEC** checkbox.

At tax time, click **Export 1099-NEC CSV** on the Vendors page. FarmBooks aggregates every transaction attached to each flagged vendor for the selected tax year and produces a CSV formatted for direct upload to TaxBandits, Yearli, or your preferred 1099 filer.

> **EIN encryption.** Vendor EINs are stored encrypted (XSalsa20-Poly1305 via libsodium) using the `BFFB_ENCRYPTION_KEY`. If the key is not defined the EIN field displays disabled with a "Encryption not configured" placeholder — no plaintext EINs are ever written to the database.

8. Employees & SSN Encryption

Path: FarmBooks → Payroll → add / edit employee.

An employee record holds first / last name, address, filing status (single / married / head of household), federal allowances, additional federal withholding, state code, state withholding allowances, additional state allowances, state dependents, state additional withholding, pay type (hourly / salary / piece-rate), pay rate, piece-rate unit (bin / lb / acre), pay frequency (weekly / bi-weekly / semi-monthly / monthly), hire date, term date, and an active flag.

SSN is stored encrypted the same way as vendor EINs. The SSN input on the employee edit form only appears when `BFFB_ENCRYPTION_KEY` is defined; otherwise the field shows the "Encryption not configured" guard.

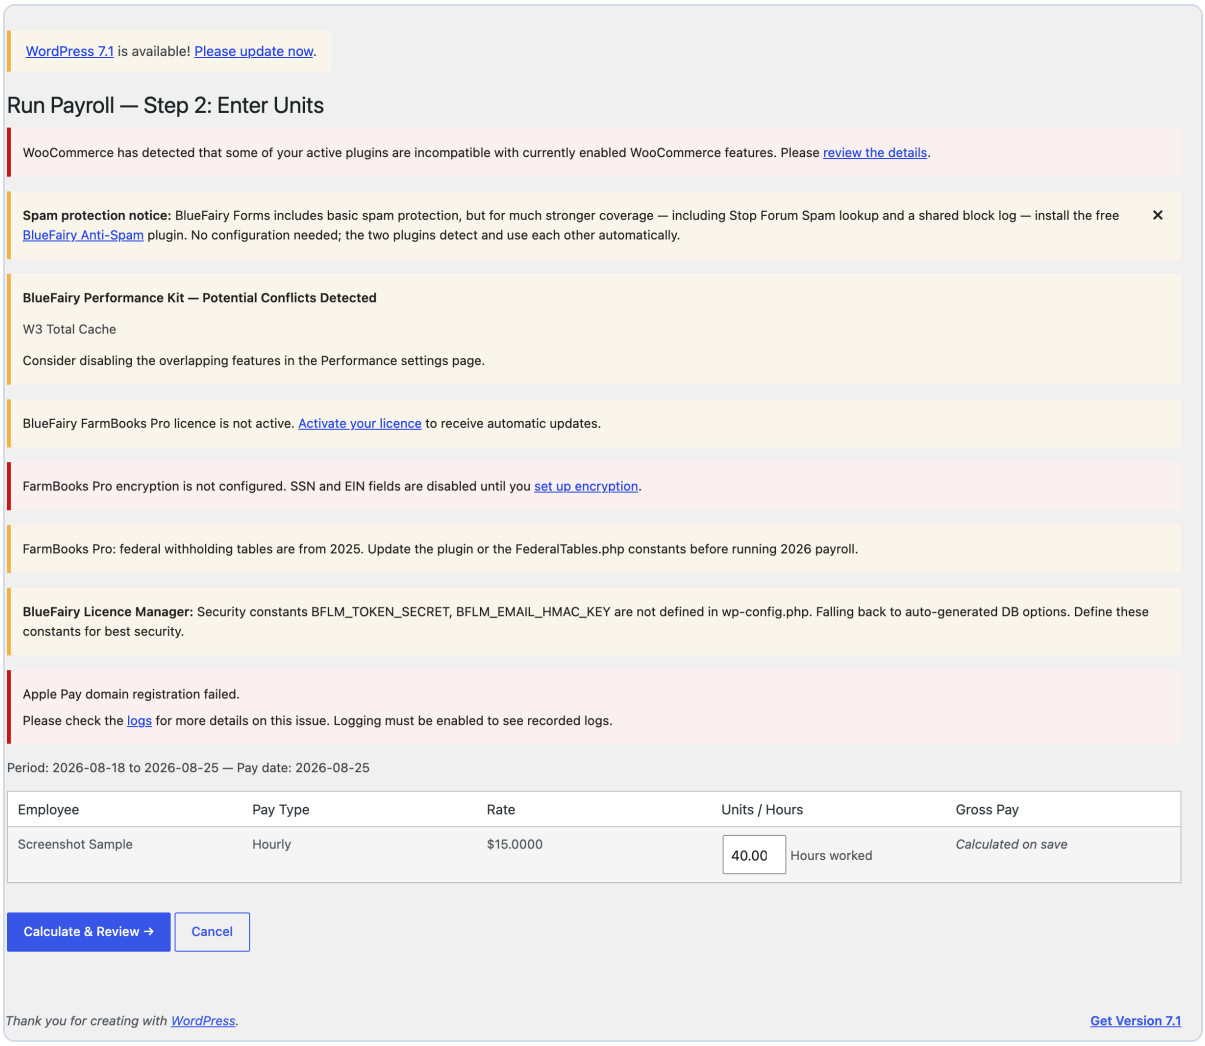

> **Silent-drop safeguard.** If encryption fails at save time (e.g., the key is base64-invalid), the plugin redirects with `bffb_notice=ssn_encrypt_failed` so you know the SSN was NOT stored — the rest of the employee record still saves.

9. Payroll Wizard

Path: FarmBooks → Payroll → **New Payroll Run**.

The payroll wizard is a three-step flow that turns a pay period plus a list of employees plus units-worked into a payroll run with correctly-calculated federal, state, Social Security, and Medicare withholdings — using the current-year IRS tax tables baked into the plugin.

1. **Step 1 — Period.** Pick period start, period end, and pay date. Check the employees to include (or click Select All). Optional notes.
2. **Step 2 — Units.** Enter units for each employee (hours for hourly, or piece counts for piece-rate). Gross pay, federal / state / SS / Medicare withholdings, and net pay are calculated live.
3. **Step 3 — Confirm.** Review the entire run. Confirm to move status from `draft` to `confirmed`. Mark as `paid` after cheques clear.

Payroll wizard step 2 — enter units for each employee and see calculated federal, state, SS, and Medicare withholdings.

Every run produces a printable pay stub (HTML today, PDF once the bundled PDF library is enabled) per employee, and a W-2 CSV export at year-end for direct upload to your W-2 filer.

Supported tax tables

Federal tables are maintained per tax year, with **2025 and 2026** both shipping, and payroll is refused outright for a year no tables exist for rather than calculated on the wrong year. State tables cover **California, Texas, Iowa, Illinois, Minnesota, Nebraska, and Kansas**, each built from that state's own published formula. Enter each employee's state withholding certificate on their record — every state that publishes a formula subtracts an allowance before applying its rate, and leaving those fields at zero withholds more than it should. Unsupported states show a "manual entry required" note in the wizard — you can still record the run, you just enter the state withholding amount yourself.

10. Budgets Grid

Path: FarmBooks → Budgets.

An inline-editable category × month grid. Each cell auto-saves to the database on blur via AJAX. The Annual column updates live as you type. Use the tax-year selector at the top to switch between planning years.

The **Budget vs Actual** report and the dashboard's budget-burn bars pull straight from this grid, so keeping it current gives you a running variance view all year.

11. Reports (Lite & Pro)

Path: FarmBooks → Reports.

Reports render in tabs. Lite ships three tabs; Pro adds five more.

Tab	Tier	What it shows
YTD Summary	Lite	Income, expenses, net for the current fiscal year
Income List	Lite	Every income transaction in the selected date range
Expense List	Lite	Every expense transaction in the selected date range
Profit & Loss	Pro	Multi-year comparative P&L by account
Cash Flow	Pro	Operating / investing / financing cash flow statement
Schedule F Prep	Pro	IRS-formatted Part I income and Part II expense lines, transcribable directly onto Form 1040 Schedule F
Budget vs Actual	Pro	Each category with its budget, actual, variance, and % used
Payroll Summary	Pro	Per-employee YTD gross, withholdings, and net; supports W-2 prep

Every Pro report exposes a CSV export button that posts to `admin-post.php?action=bffbp_export_report`.

Schedule F Prep

WordPress 7.1 is available! Please update now.

Reports

WooCommerce has detected that some of your active plugins are incompatible with currently enabled WooCommerce features. Please review the details.

Spam protection notice: BlueFairy Forms includes basic spam protection, but for much stronger coverage — including Stop Forum Spam lookup and a shared block log — install the free BlueFairy Anti-Spam plugin. No configuration needed; the two plugins detect and use each other automatically. ×

BlueFairy Performance Kit — Potential Conflicts Detected

W3 Total Cache

Consider disabling the overlapping features in the Performance settings page.

BlueFairy FarmBooks Pro licence is not active. Activate your licence to receive automatic updates.

FarmBooks Pro encryption is not configured. SSN and EIN fields are disabled until you set up encryption.

FarmBooks Pro: federal withholding tables are from 2025. Update the plugin or the FederalTables.php constants before running 2026 payroll.

BlueFairy Licence Manager: Security constants BFLM_TOKEN_SECRET, BFLM_EMAIL_HMAC_KEY are not defined in wp-config.php. Falling back to auto-generated DB options. Define these constants for best security.

Apple Pay domain registration failed.

Please check the logs for more details on this issue. Logging must be enabled to see recorded logs.

Schedule F Prep Report

For informational use only — consult your tax preparer before filing.

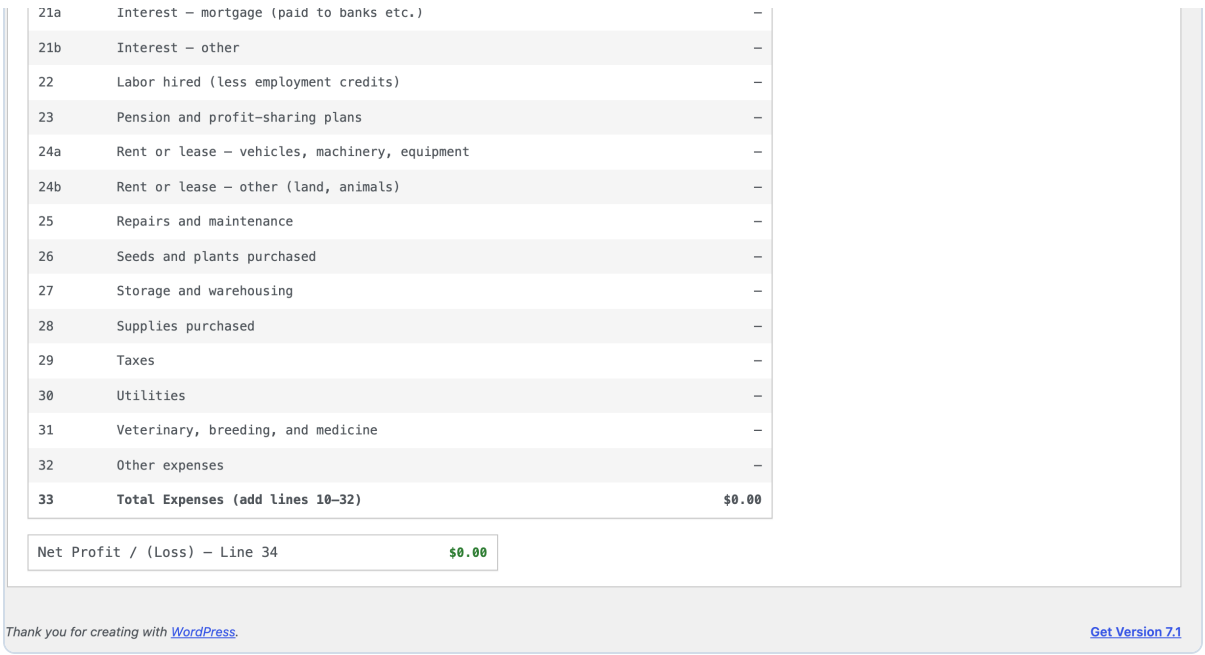

Farm Name: Blue Fairy Development **EIN:** — **Tax Year:** 2026

Part I — Farm Income (Cash Method)

Line	Description	Amount
1	Sales of livestock and other items bought for resale	—
2	Sales of livestock, produce, grains, and other products you raised	—
3a	Cooperative distributions received	—
4a	Agricultural program payments	—
5a	CCC loans reported under election	—
6a	Crop insurance proceeds and disaster payments	—
8	Custom hire (machine work) income	—
9	Other farm income	—
7	**Gross Income (add lines 1–6a, 8, 9)**	**$0.00**

Part II — Farm Expenses

Line	Description	Amount
10	Car and truck expenses	—
11	Chemicals	—
12	Conservation expenses	—
13	Custom hire (machine work)	—
14	Depreciation and section 179 expense	—
15	Employee benefit programs	—
16	Feed	—
17	Fertilizers and lime	—
18	Freight and trucking	—
19	Gasoline, fuel, and oil	—
20	Insurance (other than health)	—

21a	Interest — mortgage (paid to banks etc.)	—
21b	Interest — other	—
22	Labor hired (less employment credits)	—
23	Pension and profit-sharing plans	—
24a	Rent or lease — vehicles, machinery, equipment	—
24b	Rent or lease — other (land, animals)	—
25	Repairs and maintenance	—
26	Seeds and plants purchased	—
27	Storage and warehousing	—
28	Supplies purchased	—
29	Taxes	—
30	Utilities	—
31	Veterinary, breeding, and medicine	—
32	Other expenses	—
33	**Total Expenses (add lines 10–32)**	**$0.00**

Net Profit / (Loss) — Line 34 $0.00

Schedule F Prep — Part I (Farm Income) and Part II (Farm Expenses) line-by-line, in IRS Form 1040 Schedule F layout.

The Schedule F Prep report renders every line of Form 1040 Schedule F with the running total for the selected tax year, letting you (or your accountant) transcribe the numbers directly onto the printed form. A yellow "For informational use only — consult your tax preparer before filing" banner appears at the top of the report.

12. WooCommerce Integration

Path: FarmBooks → WooCommerce (visible only when WooCommerce is active).

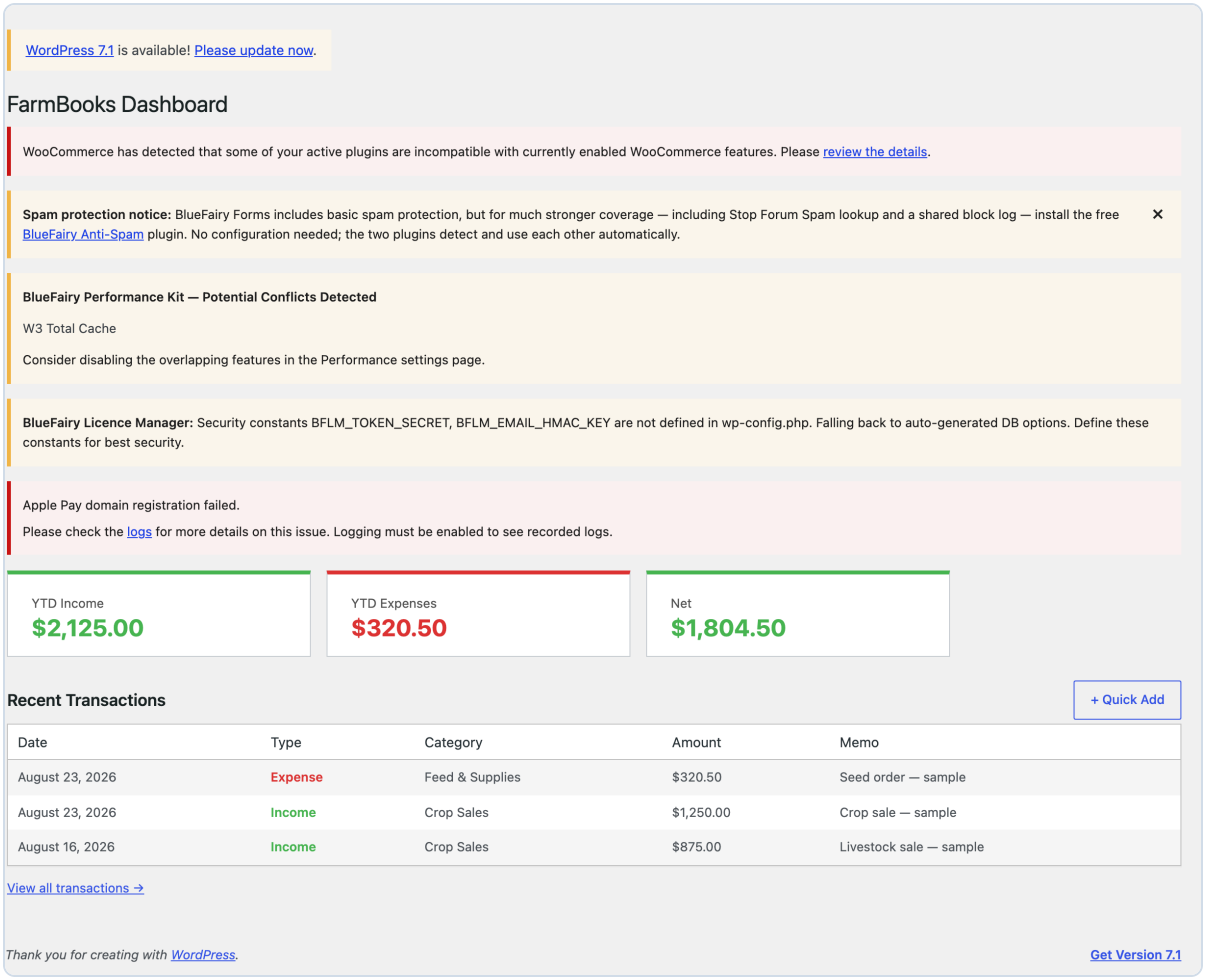

When enabled, every WooCommerce order that reaches `completed` status creates a matching FarmBooks income transaction. The category is resolved from the order's line-item product categories via the mapping table on the settings page, or falls back to the default income category you pick.

- **Duplicate guard.** A UNIQUE index on `wc_order_id` ensures a WC order can only appear once in FarmBooks — safe to re-fire the hook.
- **Historical import.** A "Import all historical completed orders" button processes every past completed order in batches of 50 via Action Scheduler (or a chunked admin-AJAX loop if Action Scheduler is unavailable).

13. Dashboard

Path: FarmBooks → Dashboard.

Lite renders four widgets: YTD Income, YTD Expenses, Net, and the ten most recent transactions.

Lite dashboard — YTD tiles plus recent transaction list.

Pro adds four more, drawn via Chart.js after page-load AJAX:

- **Expense Breakdown (YTD)** — donut chart of the top 5 expense categories
- **Income vs Expenses (Monthly)** — line chart for the current year, one line per type
- **Budget vs Actual** — horizontal burn bars per category
- **Payroll** — last paid run: period, pay date, total gross, total net

14. Encryption Setup

Path: FarmBooks → Encryption.

SSN and EIN storage requires the `BFFB_ENCRYPTION_KEY` constant defined in `wp-config.php`. The page walks you through generating a fresh 32-byte key and pasting the base64-encoded value into your config file.

```
define( 'BFFB_ENCRYPTION_KEY', 'base64-encoded-32-byte-key-goes-here' );
```

> **Back up your key.** If the key is lost or rotated without following the rotation flow, every encrypted SSN and EIN becomes unrecoverable ciphertext. Store the key alongside your `wp-config.php` backup.

15. Two-Factor Authentication

Path: FarmBooks → 2FA Security.

Plugin-scoped TOTP two-factor authentication that guards every FarmBooks admin page. Uses standard authenticator apps (Google Authenticator, Aegis, Authy, 1Password, or any RFC 6238–compatible app).

1. Open **2FA Security**. Scan the QR code (or copy the setup key manually) into your authenticator app.
2. Enter the 6-digit code from the app to verify enrollment. Ten one-time backup codes appear — store them somewhere safe.
3. Log out and back in. Any request for a `bffb-*` admin page now prompts for a TOTP code once per configured session window (default 8 hours).

Site owners can force-require 2FA for every admin user via the "Require 2FA for all admins" toggle on the 2FA page.

16. Licence Management

Path: FarmBooks → Licence.

Pro requires an active licence for update delivery. Paste the licence key you received at purchase into the Licence page and click **Activate**. The key is stored in a non-autoloaded WP option and revalidated periodically against BlueFairy Licence Manager.

You can deactivate a licence on one site to move it to another (e.g., migrating from staging to production).

17. WP-CLI Reference

```
# Verify Pro tables were created
wp db query "SHOW TABLES LIKE 'bffb_%'"

# Check the current Pro DB version
wp option get bffbp_db_version

# List active FarmBooks plugins
wp plugin list --status=active --field=name --format=csv | grep farmbooks

# Force-reactivate Pro (runs the schema migration in Installer::activate
())
wp plugin deactivate bluefairy-farmbooks && wp plugin activate bluefairy-f
armbooks

# Trigger a WC order sync manually
wp eval "do_action('woocommerce_order_status_completed', 12345);"

# Dump a payroll run
wp db query "SELECT * FROM bfw_bffb_payroll_runs WHERE id = 42"
```

18. Uninstalling

Deleting the plugin from **Plugins → Installed Plugins** preserves all farm data by default — the Pro DB tables, Pro columns on `bffb_transactions`, and every option / user meta stay in place so you can safely upgrade, downgrade, or migrate.

If you want a full wipe on uninstall, add the following to `wp-config.php` *before* clicking Delete:

```
define( 'BFFB_REMOVE_DATA', true );
```

With the constant defined, the uninstall script drops all Pro tables, removes the Pro columns from `bffb_transactions`, deletes every `bffbp_*` option, and clears every `bffbp_2fa_*` user meta row across all users.

19. Troubleshooting

Symptom	Cause / Fix
"Encryption not configured" on Vendor / Employee edit	Add `BFFB_ENCRYPTION_KEY` to wp-config.php (§14). Reload the page.
"BlueFairy FarmBooks Pro requires BlueFairy FarmBooks Lite" notice	Install and activate `bluefairy-farmbooks-lite` first; then activate Pro.
PDF export button says "PDF library not installed"	Current release ships CSV export only. PDF library will be bundled in a following point release.
Dashboard charts blank	Confirm JavaScript is enabled and check the browser console for a Chart.js load error. Try flushing your caching plugin.
Payroll run stuck in `draft`	Reopen the wizard at Step 3 and click Confirm. Only `confirmed` runs contribute to the Payroll Summary report; only `paid` runs appear on the dashboard payroll widget.
WooCommerce settings page missing	The tab only renders when WooCommerce is active. Activate WC then reload FarmBooks → WooCommerce.
2FA locked out	Use one of your ten backup codes. If those are also exhausted, run `wp user meta delete <id> bffbp_2fa_secret_ct` to disable 2FA for that user.

20. Support

Blue Fairy Development provides support to licensed FarmBooks Pro customers via the support portal or email at support@bluefairydevelopment.com.

Bug reports are especially welcome — please include your WordPress version, PHP version, plugin version (`bluefairy-farmbooks 1.0.0`), the exact page URL, and any error message text.

21. Upgrade to FarmBooks Pro

The free plugin keeps your books. **Pro runs your farm.** If you pay anyone — even one seasonal hand — or you file a Schedule F, the difference below is the difference between a ledger and an accounting system.

FEATURE	PRO	FREE
Income and expense ledger	✓	✓
Farm chart of accounts, mapped to Schedule F lines	✓	✓
YTD Summary, Income and Expense lists	✓	✓
Multisite aware	✓	✓
Profit & Loss, Cash Flow and Schedule F reports	✓	—
Farm payroll — hourly, salary and piece-rate	✓	—
Federal withholding tables (IRS Pub 15-T), 2025 and 2026	✓	—
State withholding for CA, IA, IL, KS, MN, NE and TX	✓	—
W-2 and pay stub output	✓	—
Vendors and 1099-NEC	✓	—
Budgets and Budget vs Actual	✓	—
Receipt attachments	✓	—
WooCommerce sales sync	✓	—

Without Pro you are doing payroll by hand: working out federal and state withholding yourself, typing W-2s, and rebuilding a Schedule F every spring from a spreadsheet. Pro does all three from the transactions you are already entering, and its tax tables are checked against the IRS publication on every release.

> **Get FarmBooks Pro — $129/yr →**
> One licence, unlimited transactions and employees, every report.
